SURFACES

Professional Grade Concrete Overlays

Most Commonly Used When Stamping Ready Mix Concrete

DESCRIPTION

Stone Edge Surfaces Dry Colored Release Agents are a colored fine powder concrete stamp release agent that is broadcast, cast or applied with a color shaker onto the surface of Ready-Mix Concrete as a release agent so Concrete Stamps, texture mats or texture rollers do not stick to the concrete during the stamping process.

Dry Color Release Agent color is transferred to the concrete during the stamping process, as a portion of the **Dry Colored Release Agent** becomes embedded in the concrete, usually in the low spots or indentations created by the texture mat or stamp, and the embedded color creates an antiqued or deep textured look. **Stone Edge Surfaces Dry Colored Release Agents** can also be used to match or contrast colors to create a variety of effects. A combination of colors can add realistic shading and highlights to the finished concrete surface. Excess color is washed away after concrete cures.

MOST COMMON USES:

- As a Concrete Stamp release agent when stamping Ready-Mix Concrete.
- Adds deep texture effects, highlights and antique coloring effects when embedded in the surface of Ready-Mix stamped concrete

APPLICATION

BASE/TOP COAT: Topical Coloring and Antiquing of Ready-Mix Concrete

THICKNESS: N/A

APPLICATION METHOD: Broadcast, Cast, Color Shaker

WORKING TIME: Same as Ready-Mix Concrete

PRODUCTS USED WITH:

- Ready-Mix Concrete
- Concrete Stamps

COMMONLY APPLIED OVER: Ready-Mix Concrete

DRY COLOR

release agents
