

# Stone EDGE SURFACES

Professional Grade Concrete Overlays

## DESCRIPTION

Shoe-Ins...are simply the best way to work concrete overlays when you have a large surface where you cannot reach out far enough to smooth, apply and stamp the mix properly. Built in shoe catcher on the large size (that is the only size we carry) helps hold any size shoe or boot in place so the one size we carry will pretty much fit all, with no straps, laces or buckles needed.

**Shoe-In Finishing Shoe (No Spike).** Stone Edge Surfaces No Spike Finishing Shoe-Ins disperse your weight more evenly on a fresh and firm (not hard) concrete surface that is ready to be carved. They are designed with a soft rubber flat bottom to help eliminate heel and tread patterns that could damage your stamped areas. Built in shoe catcher helps hold any size shoe or boot in place so one size will fit all, with no straps, laces or buckles needed. 1 Pair Large: (#FXTL136)

**Shoe-In Spiked Shoes.** Stone Edge Surfaces Spiked Shoe-Ins have long spikes that allow the wearer to walk into the concrete overlay mix and stay above and out of the overlay itself (except for the spikes) as you apply and disperse the concrete, with the holes made by the spikes being easily closed or removed with a trowel or smoother. 1 Pair Large: (#FXTL137)

## MOST COMMON USES

Dispersing the wearers weight across the surface of the still green overlay mix so as not to leave footprints or marks. Spike Shoe In's help the wearer apply, and smooth, concrete overlay mix on larger area applications where it is hard to reach from outside the application area and walking into the mix itself is easier and needed.

## PRODUCTS USED WITH:

- Stamp Mix
- Trowel Mix
- Spray Mix
- Self-Levelers
- Epoxy
- Pro Bond
